

The World's Most Powerful Low Priced Car

4 cylinder en bloc motor
3 3/8" bore x 5" stroke
104-inch wheelbase
4-inch tires
Cantilever rear springs
Streamline body

31 1/2 H.P.

Electric starter
Electric lights
Magnetic speedometer
Complete equipment
5-passenger Touring \$635
Roadster \$620

THE NEW SERIES

\$635 ^{75 B} *Overland* **\$635**
Roadster \$620 F. O. B. TOLEDO

This Overland is the world's most powerful low-priced car.

It has a 31 1/2 horsepower en bloc motor that is a perfect marvel for speed, power and endurance.

By increasing the bore of the motor from 3 1/8 to 3 3/8 we are able to offer a power plant which at 1950 R. P. M. develops full 31 1/2 horsepower.

Tests under every condition in all parts of the country demonstrate that it easily develops better than fifty miles per hour on the road.

Speed of course varies under different conditions, but in practically every instance it has been getting fifty miles an hour and with ease.

We have scores of telegrams showing that twenty to twenty-five miles per gallon of gasoline is not unusual.

The performance of this car is almost beyond belief.

Take any other low-priced car on the market. Pit it against this new Overland. Compare them for sheer speed, for abundance of power, for riding comfort and economy, and you'll find this car will back anything else clean off the boards.

That's a strong statement, but a fact nevertheless.

Try it yourself and see. Here are more important facts.

It has four-inch tires which are more than generous for a car of this size.

Not only has it a large and roomy body, but it has an attractive, up-to-date streamline body.

It has the latest and most improved system of ignition.

It has the cantilever springs—the easiest riding springs in the world.

What's more, it's complete. Not a thing to buy. You get the finest Auto-Lite electric starting and lighting system, magnetic speedometer, one-man top, demountable rims and practically every accessory found on the highest priced cars.

It only goes to prove how big production can cut cost and save you money.

First come, first served. Place your order now.

The September Woman's Home Companion.

The September Woman's Home Companion makes the important announcement that beginning with the October issue there will be a series of full

length novels published in two installments. Some famous writers have already sold their work to the magazine under this arrangement.

The September issue contains some splendid articles as well as

INDIANA MAN HAD A DELICATE LIVER

Made Friends Think He Would Not Live, But Black-Draught Liver
Medicine Brought Him Safely Through.

Logansport, Ind.—Mr. Anthony Wilson, of this town, says: "I was born with a delicate liver, which caused a disordered stomach, and my growth was affected by a case of malarial fever. I spent considerable money for treatments, but without any permanent relief.

I commenced using Thedford's Black-Draught at the age of 10, and continued until I was grown, and it cured me, and I consider it a rapid cure in a case like mine.

The people around here said I would never live to be a man, but Thedford's Black-Draught fooled them all.

I am now 27 years of age, and don't have to use Black-Draught only during the change of seasons, to tone up my system. As for my liver trouble, it is gone for good.

I have made many new friends for Thedford's Black-Draught, for it has merit to recommend it."

Thedford's Black-Draught has been the standard household remedy for disorders of the liver, stomach and bowels for over 75 years. You run no risk in trying it for your troubles.

Get a package of Black-Draught today. Your dealer sells it. Costs only one cent a dose. [J.B.C.]

excellent fiction. Among the articles are "The Frank Story of a Fool," in which stock speculator makes a confession; "The Stage-Struck Girl," an article by William A. Page which warns girls against the stage; and "Making Things to Sell," by Mary C. Mitchell. Other features are more or less constantly and we continually carry the hands to the mouth. If the hand has recently been in contact with infectious matter the germs of disease may in this way be introduced into the body. Many persons wet their fingers with saliva before counting money, turning the pages of a book, or performing similar acts. In this case the process is reversed the infection being carried to the object handled, there to wait carriage to the mouth of some other careless person. In view of these facts the U. S. Public Health Service has formulated the following simple rules of personal hygiene and recommends their adoption by every person in the United States.

The fiction includes "The Voice of the Clock," by Mary E. W. Freeman, "The Perfect Lover," "Welcome to our City," and the "Mysterious Mr. E." The serial by Margaret Deland, and the two-part story by Katherine Holland Brown are also present.

Among the regular departments are "Fashions," which is quite important this month; "The Tower Room," "Better Babies," "Cooking," "Art and Music," and "Better Films." There are also things for younger readers.

The picture section contains some interesting views of many things.

Notice.

If you need any work done, such as Cement, Brick, Cistern, Excavating or Well work, Call R. T. Howard, Phone 491 B.

Clean Hands.

Disease germs lead a hand to mouth existence. If the human race would learn to keep the unwashed hand away from the mouth many human diseases would be greatly diminished. We handle infectious matter more or less constantly and we continually carry the hands to the mouth. If the hand has recently been in contact with infectious matter the germs of disease may in this way be introduced into the body. Many persons wet their fingers with saliva before counting money, turning the pages of a book, or performing similar acts. In this case the process is reversed the infection being carried to the object handled, there to wait carriage to the mouth of some other careless person. In view of these facts the U. S. Public Health Service has formulated the following simple rules of personal hygiene and recommends their adoption by every person in the United States.

Wash the Hands Immediately. Before eating.

Before handling, preparing or serving food.

After using the toilet. After attending the sick and after handling anything dirty.

Students Maintain Co-operative Store at the University of Missouri.

One of the important departments of the University of Missouri is the University Co-operative store, maintained by the students of the University for the purpose of selling themselves books, stationery and general supplies.

The store is managed by a board of directors elected by the students. The board then selects a general manager from among its members.

Rebate slips for five per cent on the dollar are given with all purchases, and are returnable to the store for merchandise. The Co-op, as it was called, also has a profit-sharing system by which these rebate slips are returned at the end of the spring school term, and come in to the holder for a cash per cent of the profit made by the store during the year.

The Co-op is conveniently located in the basement of the Academic Hall.

Ladies, if you have any summer clothing to be cleaned and pressed, call Paul Heidenrich at Stier Clothing Co. Everything hand pressed. Phone 362.

SWAT THE FLY.

Prevention and Cure Both Recommended by the Experiment Station to Control Typhoid Carrier.

The best means of getting rid of flies is to never let them get a foothold, according to W. W. Swett of the Missouri Agricultural Experiment Station. Although his recommendations are made mainly from the standpoint of protecting cows against flies, they are just as applicable to the protection of people.

The best means of fly control is through preventing them from breeding. It requires ten days for the fly to develop from egg to adult, so if all barnyard manure and other filth in which it can develop is cleaned up every five to eight days, the flies' supply will be cut off. If it is impossible to remove the filth far enough so that the flies which breed in it cannot reach the house or barns, it may be treated with powdered borax sprinkled over the manure pile or other filth at the rate of about an ounce for each cubic foot to be treated. After it has been sprinkled on, it should be washed through the pile with water. Half a pound of Hellebore which has been allowed to stand in ten gallons of water from ten to twenty-four hours may be sprinkled at the rate of a gallon to the cubic foot on the filth to be treated.

In either barns or houses, fly-traps help a little and a great deal of relief may be obtained by mixing half a pint of milk, half a pint of water, and two tablespoonfuls of formalin (40 per cent formaldehyde.) Stronger mixtures have so much formalin in them that the flies do not drink it. A slice of bread may be placed in the plate in which the mixture is exposed.

Cows may be protected by means of commercial or home-made repellants. Pyrethrum powder is good and the commercial repellants are generally preferable if they do not cost too much. Home-made mixtures of either one part of crude carbolic acid or pine tar with nine parts of cotton seed oil give very good results if applied lightly, but if applied too heavily they will injure the skin and hair and do more damage than the flies will.

University of Missouri Holding Live Stock Campaign.

A campaign with the purpose of improving the live stock of Missouri has just been started by S. T. Simpson of the College of Agriculture of the University of Missouri in co-operation with F. A. Gougler, county agent of Johnson county. Professor Simpson and Mr. Gougler are touring the state, visiting farmers, especially the breeders of good sires, pointing out the good and bad animals and offering general suggestions that will aid the breeders in improving their stock. Lectures and demonstrations are being given daily at the different places visited.

Mr. Simpson will also select farms to be used in the future by the University in carrying on breeding and feeding demonstrations.
